## Mosquito Control Treatments Scheduled in Monterey Park

**West Covina, Calif. (June 22, 2026)** — The San Gabriel Valley Mosquito and Vector Control District ([SGV Mosquito](#)) will be conducting residential mosquito control treatments via truck in the city of Monterey Park. The application is being conducted in an effort to reduce the number of mosquitoes in the area that create a significant public health risk. SGV Mosquito will use ultra-low volume applications to target adult mosquito populations and lower the risk of mosquito-borne disease transmission to the community.

The mosquito control treatments will be conducted Wednesday, June 24<sup>th</sup> and Thursday, June 25<sup>th</sup> between 12AM – 5AM. If weather conditions are not favorable, or if there are operational delays, the application may be postponed or delayed. Postponed treatments will occur the following week. The treatment will occur in the area between W. Floral Dr. and the 60 Freeway, east of Vancouver Ave. and west of Collegian Ave.

SGV Mosquito specialists will be applying [Aquaduet](#) which contains Sumithrin and Prallethrin®, active ingredients formulated to mimic the properties in chrysanthemum flowers. Since the material is suspended in water, the application will not harm the finishes on cars or homes.

Every effort will be made to notify residents in the treatment areas through physical postings, social media, Nextdoor, and news media. The public is also encouraged to visit the District’s website ([www.SGVmosquito.org](http://www.SGVmosquito.org)) for the latest information on mosquito activities.

Mosquito control is a shared responsibility and as mosquito activity increases, residents must take an active role in reducing the threat of mosquito-borne diseases to themselves and in their neighborhoods.

Follow the tips below to reduce mosquito populations on your property:

- Eliminate standing water in clogged rain gutters, rain barrels, discarded tires, buckets, watering troughs, or anything that holds water for more than a week.
- Ensure that swimming pools, spas, and ponds are properly maintained.
- Change the water in pet dishes, birdbaths, and other small containers weekly.
- Report neglected swimming pools in your neighborhood to your vector control district.

Follow the tips below to prevent mosquito bites:

- Apply mosquito repellent to exposed skin before going outdoors and reapply as recommended on the label.
- Wear insect repellent containing CDC and EPA approved active ingredients: DEET®, Picaridin, IR3535, or Oil of Lemon Eucalyptus.
- Wear light-colored, long-sleeved shirts and long pants.

#### **About SGVMVCD**

SGVMVCD is one of five vector control districts in Los Angeles County. Year-round, the agency monitors stagnant water sources, such as gutters, storm drains, channels and non-functional swimming pools. The agency also routinely monitors populations of adult mosquitoes using traps and tests groups of adult female mosquitoes for the presence of WNV and other mosquito-borne diseases. In addition, the agency submits samples from dead birds, such as crows, for testing, which can provide insight into the spread of WNV.
